

GLUTA DRIP / PUSH CONSENT FORM

Reasons/Benefits: For skin whitening and detoxication using compounded Vitamin C and glutathione via intravenous infusion. Vitamin C is an antioxidant and is essential for the formation and stabilization of collagen and elastin. Vitamin C also has skin clarifying properties. Glutathione is a natural liver enzyme that the liver needs for breaking down toxins. With succession of treatment, skin whitening injection will make your skin brighter and clearer.

Risk/Identification: Pain, Bleeding, Bruising, infection and ineffective treatment. Excessive sun exposure will minimize the effects of treatment. As such, It is important to avoid sun exposure and to wear sunblock every day for optimal result from this treatment. If you are tanned or have excessive sun exposure. Sun exposure decreases the efficacy of the treatment. This treatment is not suitable for patients that are sick or has liver/kidney problems.

Alternative for whitening injections: Chemical peels, cosmeceuticals, maintenance skin products (Vitamin C, exfoliant and Sun screen) IPT, Photo facial and ablative laser treatment. Using oral glutathione as maintenance care following this treatment will enhance skin whitening.

Frequency and duration: For optimal results, you will need series of treatments. Initially, every week for several weeks and then the duration of treatment could be lengthened to once every 2 to 3 weeks and then once every 4 to 6 weeks. You can expect to see results within 2 to 4 weeks.

Treatment: An IV drip using normal saline solution with compounded Vitamin C and glutathione added to the normal saline bag.

Duration of treatment: About 15 to 30 minutes for each session.

Post treatment precautions: Avoid sun exposure, tanning booths, spray tan, and wear sun screen on a daily basis. Apply pressure over the IV site and avoid vigorous exercises of the involved extremity for 1-2 days to minimize risk of bleeding
